

Ecoustic® E110

OVERVIEW

Peavey Ecoustic Series amplifiers are highly versatile amplification systems designed for acoustic instruments, vocals and line-level devices such as samplers and audio players in performance and rehearsal applications. The Ecoustic E110 provides 100 watts of clean power into a bi-amplified system containing a 10" full-range loudspeaker and a high-frequency horn. Both channels operate independently, with 9-band graphic EQ on channel 1 and two-band adjustment on channel 2, a Notch Filter and Phase Inverter on channel 1 to control feedback, footswitchable Mute/Tuner, and more. The master section includes digital reverb, chorus and delay with channel assignment and parameter adjustment, and the foot controller allows users to access up to eight presets plus an onboard looper.

FEATURES

- Two independent channels
- 1 x 10 full-range loudspeaker plus 1 high frequency horn
- Nine-band graphic EQ on channel 1
- Combo XLR-1/4 input on each channel
- Footswitchable Phase inverter for controlling feedback
- Notch Filter on channel 1 for controlling feedback
